Golf Walk and Ride Trolley
GolfWalkandRide.com

Ride the Fairways and Walk the Greens.

The innovative Golf Walk and Ride Trolley provides golfers the option of walking and riding on the golf course.

The unique Golf Walk and Ride Trolley features twin custom hub motors, three max speed settings, a twist throttle and a thumb throttle, and regenerative braking to ensure a smooth ride.

The minimalist uni-frame design is stainless steel, sleek yet sturdy, with a maximum rider weight of 265 pounds.

The Golf Walk and Ride Trolley easily navigates the golf course with wide gradual turns. Turns are initiated by lifting the front end wheel and turning the front end left or right.

The transition between walking and riding is a simple procedure of attaching and detaching the rear axle to the golf trolley upper frame.

Lightweight and easily collapsible, the Golf Walk and Ride Trolley is readily transportable, to and from the golf course, in the trunk of a car.

Assembly and disassembly is achieved in a matter of minutes, with as few as two slide-in frame connections.

The Golf Walk and Ride Trolley is available for purchase online.

A 10-day return policy is offered if not fully satisfied.

Visit GolfWalkandRide.com for product photos, videos, specs, FAQ, and endorsements.
